- Goals
    - Finish mapping functionality
    - Provide reliable and up to date parking availability
    - Allow users to report open parking spots quickly and accurately

---

User Story 2.1 (13 pts)

As a user, I want to tap on the map to drop a pin so that I can report a spot that isn't exactly where I am standing.

Tasks:

- Enable map interaction to detect tap/long-press location (3 hrs)
- Display temporary pin on tap for confirmation (2 hrs)
- Allow user to adjust pin before submitting (2 hrs)
- Pass selected coordinates to backend report endpoint (2 hrs)
- Frontend UI for confirming dropped pin location (2 hrs)
- Connect frontend + backend for manual pin reporting (2 hrs)

Estimated time: ~13 hrs

User Story 2.2 (5 pts)

As a driver, I want to indicate whether the parking spot is free or paid.

Tasks:

- Update database schema to include `is_paid` field (1 hr)
- Update backend models & request schemas (1 hr)
- Add free/paid toggle in reporting UI (1 hr)

Estimated time: ~3 hrs

User Story 2.3 (8 pts)

As a driver, I want to see parking spots reported by other users so that I can choose where to park without circling.

Tasks:

- Fetch all active parking reports from backend (2 hrs)
- Render parking spot markers on map (2 hrs)
- Different marker styles for free vs paid spots (2 hrs)
- Marker tap interaction (basic info popup) (2 hrs)

Estimated time: ~8 hrs

User Story 2.4 (5 pts)

As a driver, I want older or less reliable spot reports to appear differently so that I can make better parking decisions.

Tasks:

- Add expiration or timestamp logic to reports (1 hr)
- Backend rules to flag or filter outdated reports (1.5 hrs)
- Frontend logic to visually fade or gray out old markers (1.5 hrs)
- Auto-hide expired spots from map (1 hr)

Estimated time: ~5 hrs

User story 2.5 (5 pts)

As a driver, I want spot markers to visually indicate age and reliability so I can identify helpful spots at first glance.

- Implement logic where it shows colors as age (ie. green = recent, red = old) for markers (2 hrs)
- Add a note to show what the green/red means on the marker (1 hr)

- Initial task assignment
  Kenny: Get caught back up onto implementing the map centering on user
  Ethan: Get caught back up onto implementing the map centering on user
  Kyle: Work on database schemas
  Maxwell: Work w/ Kyle

- Team roles
  Kenny: Project Owner
  Ethan: Scrum Master
  Kyle: Developer
  Maxwell: Developer
