Actions to stop doing:

- We should keep our SCRUM meetings shorter and more concise with information
- The team should try to write more descriptive comments on what specific functions should do

Actions to start doing:

- The team should try to work on understanding more of each part of the code, even parts that we didn't directly work on
- We should start trying to look at more of the extra features that we thought we wouldn't have time for, and try to implement them

Actions to keep doing:

- Keep reviewing each other's work and trying to see if everything works on both IOS and Android
- Continue checking in with other people about what they could need help with or what as a group we think we could be doing better
- Continue working as a group at a specified time

Work completed/Not completed:

- [x] ~~User Story 4.1~~
- [x] ~~User Story 4.2~~
- [x] ~~Update our database based off of the taken spots accordingly~~
- [x] ~~User Story 4.3~~
- [x] ~~User Story 4.4~~
- [x] ~~Remove all of the soft locks, such as when you take a pin, and then you remove that taken pin~~

Work Completion Rate: 4/4

During Sprint 4, the team successfully completed all of the user stories. Team members allocated an hour or two each day in order to complete user stories and fix bugs. The development team's productivity is around the same as in Sprint 3, because we are collaborating well as a team and have a good grasp on all of the frameworks and research needed to complete our app.
